Important News

A re-think on our HSE training strategy

PDO has long provided extensive HSE training to its workforce. In fact last year over PDO delivered training to over 110,000 people - quite an expenditure. Training is delivered to add value whether by increasing competency or changing a mindset and now PDO is reflecting on fundamental questions: What we train? Why we train it? How we deliver training for our new younger working population. Change is coming.

What You Need to Know

Competency is key:

Competency assessments for some key courses in the future will only be conducted after experience has been gained whilst on the job. People gain knowledge after attending a course but only become competent after testing what they think they know in practice.

Pre-requisites:

Many HSE courses currently require people to fulfil a range of prerequisites that add no value to the course being attended, A review of the practicality of these has been conducted and many of them will disappear. Watch out for news this week.

Whats happening:

HSE Training Level 1 audit completed September 2014.
HSE Approved Training Provider meeting 30th October 2014
Well Engineering new orientation kick off 30th October 2014
HSE Working group update November 5th 2014

Studies show that lecturing is the least effective method of teaching as less than 18% of what you are taught is remembered and so now interactive styles of training are the new way of thinking. If you enjoy the experience then you will be more receptive to the message and more open to learning. PDO has begun a journey to radically over-haul its training which will deliver a step change in HSE performance and make ones whole HSE training experience one to enjoy.

HSE Advice Note

Reflective learning is a great hit

PDO has piloted the new concept of *reflective learning* which vastly enhances the ability of people to retain knowledge resulting from learning from our past HSE incidents. The response to the new method has been a resounding success and now the MSE team is busy designing the package of materials which will allow supervisors to deliver it to the front line staff within the worksites. The concept is based on interaction and a questioning approach, making our brains work out what can go wrong in our own workplace rather than simply passively receiving information about an incident.

By questioning, debating and challenging the learnings and then assessing where each operation can suffer the same fate, and how best to avoid people locally suffering the same fate, people are engaged and are more likely to remember and then to live the learning from those less fortunate. The forums so far have been energetic, lively and very noisy, but everyone attending has enjoyed them and felt they were worthwhile and definitely memorable... which is precisely what it is all about.. remembering the message, tomorrow and in the future.

PDO will be delivering 'train the trainer courses' so that focal points can cascade the initiative down through the management chain right to the people who are most at risk from the activities. To ensure maximum efficiency we are currently devising a tailored plan for each individual directorate for the roll out and so keep your eye and ears out for when the new concept lands at your worksite. We hope that it will make your learning from incidents a more engaging and enjoyable experience for you and everyone concerned.

LEARNING FROM INCIDENTS
