Important News

At a time of high demand on staff and contractor resources, coupled with the price of oil, it is vital that we look to simplify our HSE procedures and specifications, guidelines and practical workplace methods. PDO MSE function is playing its part in a full review of the HSE in contract processes. The MSEM team has been working with other stakeholders, including Lean practitioners, to develop simpler processes and yet maintain robust HSE aspects of contract management.

This HSE review is not just about simplification but also to ensure that PDO maintains its overall risk profile maintains compliance and works towards continual improvement. We must remind all readers that if we are going to succeed in business then HSE has to be managed well and the process starts right at the planning phase by identifying the major HSE risks in the expected activities.

PDO has specific phases of contract where HSE is emphasised to assure compliance.

What You Need to Know

Planning Phase:

Planning Phase

The risk profile of the contract itself must be known. As a member of a PDO contract team or a contractor, planning to bid for an upcoming contract, if the risks and controls are not identified then the management of the subsequent phases could result in losses. PDO MSE provides support to dictate the future risk profile of all

Tendering with PDO:

Tendering and Evaluation phases

PDO has a HSE evaluation model. The model consists of a questionnaire, which is sent out to all contractors bidding in Medium and High Risk contracts. PDO MSE has, in October 2015, updated the questionnaire and scoring method to align to changes in our business landscape. The changes

Evaluation:

HSE Evaluation 'Banding'

It is vitally important that a contractor, wishing to do business with PDO, can attain a certain level of HSE management. This is important to meet legislative and contract requirements. Nonetheless, the PDO HSE evaluation process does allow for developing organisations and provides

HSE Advice Note

HSE Advice Note

The management of HSE in contracts is central to the successful and safe completion of a contract activity and therefore to the business. Whether embarking on a major project or simply providing manpower under a contract price agreement the exposure of personnel to the risk areas must be identified, managed and controlled.

To ensure that PDO systematically manages HSE in contracts, internally it follows 7seven phases of contract and highlights the HSE requirements in each phase.

(1) Planning we have stated the need to identify the risk of the contract. The management mode (1,2 or 3) will also dictate the requirement to follow PDO procedures or perhaps the contractor. Under mode 1 PDO rules will be followed. Mode 2 the contractor will be expected to execute all aspects of the job under its own HSE management system. In Mode 2 PDO will be responsible to verify the overall effectiveness of the management by a robust HSE monitoring plan. Mode 3 the contractor has no formal interfaces with PDO and operates within its own management system.

(2) Tendering through to evaluation PDO and contractors (at this stage known as Tenderer or bidder), will be preparing the evaluation models and submissions. This is a critical stage for the contractor and the need to demonstrate the level of HSE maturity by ensuring the HSE evidence is available for the HSE review. MSEM function team support the evaluation process and deliver the reports i.e. 'Banding'.

(3) Evaluation and Award at this stage the award is notified and the formal relationship is established. In in HSE terms the Contractor must demonstrate their full understanding of the HSE requirements and begin to deliver on the control measures.

(4) Mobilisation – the period before the physical activity commences. Contract teams should be focused on the HSE basics such welfare issues accommodation and food provision, medical checks and site arrangements and HSE Mandatory training records.

(5) Execution of the contract is where we can recognize how well the planning phase was conducted. The key tool at this time is the agreed HSE monitoring plan and this should include all the key performance indicators and a regular analysis of the HSE management.

The final 2 phases include:

(6) De-mobilisation

The demob period can be present a particularly challenging period as key personnel begin to leave the contract. The same level of HSE monitoring is required in all activities from inspection to health checks.

(7) Close out Report - The PDO close out report is an internal review of the HSE aspects of a contract or project where lesson learned will be recorded and highlighted for future improvement measures. If the HSE monitoring has been rigorous from the start then the detail for such a report will be all the more worthwhile.
