WORKING FOR YOU TO KEEP YOU SAFE

Latest HSE Statistics YTD 30 November

	2014	2015
Workplace fatalities	4	2
Non-work related fatalities	4	4
Non-accidental deaths (NADs)	11	13
Lost Time Injuries (LTIs)	53	47
All injuries (excluding first aid cases)	164	162
Motor Vehicle Incidents (MVIs)	99	78
Roll over - MVIs	30	23
Serious MVIs	32	29
Lost Time Injury Frequency (LTIF)	0	0

Life Saving Rules Violations

YTD 30 November

Journey management	33
Speeding/GSM	6
Seatbelts	36
Overriding safety device	0
Working at heights	3
Permit	10
Confined space	0
Lock out tag out	2
Drugs and alcohol	0
Gas testing	0
Smoking	0
Suspended Load	0

Vehicle Class A/B Defect

YTD 30 November

Class A	113
Class B	3566

Protecting the Environment

PDO delivers growth, competitive performance and operational and project delivery excellence, while effectively managing the environmental impacts associated with oil and gas production. A newly enhanced environmental management specification facilitates these demands and is integral to PDO's success. Essential elements of the specification are simplicity, clarity and a drive towards sustainable environmental improvement.

What You Need to Know

Managing the Risk:

Environmental protection and a need to respond to current and future environmental risks led to the development of a simplified environmental management specification. It provides mandatory company-level requirements and accountabilities.

Continuous Improvement:

The specification consolidates and replaces four existing specifications (SP-1005, SP-1006, SP-1007 and SP-1009) and contains nine sections and each section is efficiently summarised into one neat page for clarity. Its been LEANED.

Focus areas:

- Flaring & Venting
- Air Emissions
- Greenhouse Gas & Energy Management
- Ozone Depleting Substances
- Soil & Groundwater Contamination
- Water
- Waste Management
- Impact Assessment
- Performance Monitoring & Reporting

This specification consolidates and replaces four existing environmental specifications and aims to provide a starting point towards understanding and managing environmental risks in new projects and existing assets. The specification is sub-divided into nine individual sections, each focusing on different environmental risk areas. Each of the nine sections lists mandatory requirements and organisational accountabilities to mitigate and manage the risks.

HSE Advice Note

PDO seeks a high standard of environmental performance, promoting the long-term benefits to its shareholders, its employees and Oman as a whole. To achieve this, a holistic environmental strategy was endorsed in 2015 to attain compliance with regulatory and corporate requirements, as well as the adoption of international standards and best practices. This environmental strategy, appropriately, identified the need to revise and redraft the environmental management specification with an objective to simplify while addressing all the environmental risks.

In the beginning of 2015, an independent review of our existing specifications was commissioned to benchmark against international best practices. In parallel, an extensive internal assessment of environmental risks, mitigation and opportunities was conducted. These two foundational activities led to the development of an initial draft of specification for environmental management. Finally, thorough engagements with different teams at all levels of the organisation were conducted to seek feedback on this specification.

This extensive exercise resulted in consolidation of our four existing environmental specifications into a single specification for environmental management. The specification provides a starting point towards understanding and managing environmental risks in new projects and existing assets. The new specification can be accessed via [link](#) on PDO HSE webpage. Please feel free to contact MSE 2 team for any feedback and questions.
